2018 Air Quality Annual Progress Report (APR) for Glasgow City Council

In fulfilment of Part IV of the Environment Act 1995

Local Air Quality Management

August 2018

Local Authority Officer	K Reid
Department	Sustainable Glasgow
Address	231 George Street, Glasgow. G1 1RX
Telephone	0141 287 9251
E-mail	Ken.reid@glasgow.gov.uk
Report Reference number	GCC/LES/SG/APR2018
Date	August 2018

Executive Summary: Air Quality in Our Area

Air Quality in Glasgow

During 2017, Glasgow City Council has measured concentrations of Nitrogen Dioxide (NO_2) above the Annual Mean Objective at two automatic monitoring stations within existing Air Quality Management Areas (AQMA's) and at multiple locations, by diffusion tube, within the existing City Centre AQMA. The Hourly Mean Objective was not exceeded at any of the automatic monitoring stations.

Neither the Annual Mean Objective for PM_{10} nor the Daily Mean Objective was exceeded at any monitoring location during 2017.

For Scottish Local Authorities particulates at $PM_{2.5}$ have now been prescribed in regulation with an Annual Mean Objective of 10µg/m^3 by 2020 this objective was not exceeded at any monitoring location during 2017.

Monitoring within the Parkhead AQMA during 2017 confirmed compliance with the Annual Mean Objective for NO_2.

Monitoring within the Byres Road / Dumbarton Road AQMA during 2017 confirmed compliance with the Annual Mean Objective for PM_{10}.

Consequently, Glasgow shall now proceed with the revocation of the AQMA's currently in place in respect of the Annual Mean Objective for NO_2 at Parkhead Cross and the Annual Mean Objective for PM_{10} at Byres Road / Dumbarton Road.

Actions to Improve Air Quality

In response to the implementation of the AQMA's in the city, Glasgow Council produced Air Quality Action Plans in 2004 and 2009 introducing a range of measures aimed at reducing pollution in the city. The Action Plan is an evolving project, several measures such as vehicle idling enforcement, vehicle emission testing and initiatives towards cleaner vehicles remain on going. Other measures such as a council workplace travel plan and city car club continue to evolve.

The Council continues to promote and facilitate improvements in sustainable transport through investment in cycling infrastructure, such as the Avenues and City Ways projects, and easier public access to air quality information have been introduced.

Link to Glasgow's City Centre Transport Strategy 2014 - 2024
https://www.glasgow.gov.uk/index.aspx?articleid=18276

Measures which have progressed during 2017 within the Air Quality Action Plan (AQAP) programme are shown in Table 2.2. An AQAP summary is shown in Appendix D.

Measures recently progressed by the council include the Glasgow ECO Stars Fleet Recognition Scheme, which aims to promote best practise for fleet operators, being extended to include Glasgow Taxis. This membership encompasses 728 vehicles, the vast majority of which are Hackney carriages. This is the largest ECO Stars Taxi Scheme in the UK.

During 2017, Glasgow successfully secured funding for the procurement and installation of two CityTrees. Although the CityTrees in themselves are designed to improve air quality in their immediate vicinity, the principals behind the purchase were the introduction of green infrastructure to hard stand areas of the city centre and to raise awareness of air quality issues via information panels on the installations.

Unfortunately, whilst the CityTrees have been reasonably well received there has been ongoing issues with the irrigation systems and connectivity. The manufacturer has recently replanted both installations and is preparing to replace the irrigation and communication systems following the completion of the European Championships which are currently taking place in Glasgow.

George Square in Glasgow city centre was largely taken over in celebration of this year's National Clean Air Day, 21 June 2018. This year's event being substantially larger and wider in scope than before. Much of the square was filled with events and activities ranging from displays of electric vehicles, including a 'London' taxi, from a range of manufacturers such as Nissan, Tesla, and BMW.

The normally busy road in front of the chambers was sealed off to traffic to allow city school children to improve their cycling skills in a 'Bikeability' challenge overseen by

Cycling Scotland. The children were then encouraged to show off their skills on a "pump track" set up in the square by the Glasgow 2018 European Championships team.

Information and demonstrations from a diverse range of bodies including Ricardo Energy and Environment, Living Streets, Home Energy Scotland and Healthy n Happy Community Development Trust all added to the flavour of the day.

Local Priorities and Challenges

The Scottish Programme for Government announced in 2017 that there would be Low Emission Zones (LEZ's) in 4 cities in Scotland, with Glasgow expected to be the first in 2018.

Glasgow City Council have agreed to introduce Scotland's first LEZ in an area broadly equivalent to the city centre AQMA by the end of 2018 subject to receiving the relevant approval from the Traffic Commissioner. The LEZ is an essential measure for improving air quality in the city centre and beyond. Initial modelling for the LEZ indicates that reductions of up to 16µg/m^3 are possible by reducing bus emissions on some of the more polluted streets, such as Hope Street.

The LEZ marks the beginning of a journey to make Glasgow a better place in which to live, work and visit. The LEZ Phase 1 will address local bus journeys only from 31 December 2018, leading to all vehicles entering the zone, including private cars, being fully compliant by the end of 2022.

Retrofitting/replacing hundreds of non-compliant buses across a range of operators is a significant financial and logistical challenge and will require the cooperation from and range of agencies, organisations and stakeholders for the LEZ to be a success.
It is worth noting that that Glasgow is the first UK city outside of London to commit to including cars within our LEZ.
It is anticipated that the implementation of the LEZ in Glasgow will monopolise the majority of the Council's air quality resources. However, it is also recognised that the AQAP was last revised in 2009 and will be reassessed in 2019.

An increased emphasis with regard to the awareness and enforcement of legislation to reduce vehicle idling, particularly in the vicinity of schools will be introduced during 2018. In addition to the established awareness campaigns via advertising on buses etc. Banner messages, as shown below, will be displayed around schools.

How to Get Involved

Information relating to Local Air Quality Management (LAQM) and AQMA's in Glasgow is available via the Glasgow Council website. This information includes Air Quality Action Plans, Progress Reports and Detailed Assessments.
https://www.glasgow.gov.uk/index.aspx?articleid=18863
The website also contains links to the national Air Quality in Scotland webpage where the public can access both real time and historical monitoring data in addition to registering to receive text/email alerts where poor air quality is forecast.
http://www.scottishairquality.co.uk/

Table of Contents

List of Tables

List of Figures

1. Local Air Quality Management

This report provides an overview of air quality in Glasgow during 2017. It fulfils the requirements of Local Air Quality Management (LAQM) as set out in Part IV of the Environment Act (1995) and the relevant Policy and Technical Guidance documents.

The LAQM process places an obligation on all local authorities to regularly review and assess air quality in their areas, and to determine whether or not the air quality objectives are likely to be achieved. Where an exceedance is considered likely the local authority must declare an Air Quality Management Area (AQMA) and prepare an Air Quality Action Plan (AQAP) setting out the measures it intends to put in place in pursuit of the objectives. This Annual Progress Report (APR) summarises the work being undertaken by Glasgow to improve air quality and any progress that has been made.

Table 1.1 – Summary of Air Quality Objectives in Scotland

Pollutant	Air Quality Objective		Date to be achieved by
	Concentration	Measured as	
Nitrogen dioxide (NO_2)	200 µg/m^3 not to be exceeded more than 18 times a year	1-hour mean	31.12.2005
	40 µg/m^3	Annual mean	31.12.2005
Particulate Matter (PM_{10})	50 µg/m^3, not to be exceeded more than 7 times a year	24-hour mean	31.12.2010
	18 µg/m^3	Annual mean	31.12.2010
Particulate Matter ($PM_{2.5}$)	10 µg/m^3	Annual mean	31.12.2020
Sulphur dioxide (SO_2)	350 µg/m^3, not to be exceeded more than 24 times a year	1-hour mean	31.12.2004
	125 µg/m^3, not to be exceeded more than 3 times a year	24-hour mean	31.12.2004
	266 µg/m^3, not to be exceeded more than 35 times a year	15-minute mean	31.12.2005
Benzene	3.25 µg/m^3	Running annual mean	31.12.2010
1,3 Butadiene	2.25 µg/m^3	Running annual mean	31.12.2003
Carbon Monoxide	10.0 mg/m^3	Running 8-Hour mean	31.12.2003
Lead	0.25 µg/m^3	Annual Mean	31.12.2008

2. Actions to Improve Air Quality

2.1 Air Quality Management Areas

Air Quality Management Areas (AQMAs) are declared when there is an exceedance or likely exceedance of an air quality objective. After declaration, the authority must prepare an Air Quality Action Plan (AQAP) within 12 months, setting out measures it intends to put in place in pursuit of the objectives.

A summary of AQMAs declared by Glasgow can be found in

Table 2.1. Further information related to declared or revoked AQMAs, including maps of AQMA boundaries are available online at

https://www.glasgow.gov.uk/index.aspx?articleid=18863

Monitoring within the Parkhead AQMA during 2017 confirmed compliance with the Annual Mean Objective for NO_2.

Monitoring within the Byres Road / Dumbarton Road AQMA during 2017 confirmed compliance with the Annual Mean Objective for PM_{10}.

Consequently, Glasgow shall now proceed with the revocation of the AQMA's currently in place in respect of the Annual Mean Objective for NO_2 at Parkhead Cross and the Annual Mean Objective for PM_{10} at Byres Road / Dumbarton Road.

Table 2.1 – Declared Air Quality Management Areas

AQMA Name	Pollutants and Air Quality Objectives	City / Town	Description	Action Plan
City Centre AQMA	NO_2 Annual Mean	Glasgow	The city centre AQMA is loosely bound by the M8 motorway to the west and north (with slight protrusions at North Street and Royston Road), by High Street and Saltmarket to the east and by the river Clyde to the south. This area was declared an AQMA in 2004 in respect of the annual mean NO_2 Objective.	Glasgow City Council Air Quality Action Plan 2009 https://www.glasgow.gov.uk/CHttpHandler.ashx?id=32447&p=0

AQMA Name	Pollutants and Air Quality Objectives	City / Town	Description	Action Plan
	PM_{10} Annual Mean NO_2 Hourly Mean		In 2007 the area covered by this AQMA was extended and declared in respect of the annual mean PM_{10} Objective. In 2012 a further extension of the AQMA was declared and the order amended in respect of the hourly mean NO_2 Objective.	
Parkhead Cross AQMA	NO_2 Annual Mean	Glasgow	Parkhead Cross is formed by the convergence of five roads in Glasgow's east end. The roads are Westmuir Street, Tollcross Road, Springfield Road, Duke Street and Gallowgate. The area is a mixture of commercial and residential properties within mostly tenement properties. This area was declared in 2007 in respect of the annual mean NO_2 Objective.	Glasgow City Council Air Quality Action Plan 2009 https://www.glasgow.gov.uk/CHttpHandler.ashx?id=32447&p=0
Byres Road and Dumbarton Road AQMA	NO_2 Annual Mean	Glasgow	This AQMA extends from the junction of Byres Road and Great Western Road, south to Dumbarton Road and west along Dumbarton Road as far as Thornwood Drive roundabout. This area was declared an AQMA in 2007 in respect of the annual mean NO2 Objective. In 2012 the area covered by this AQMA was extended northwards along Queen Margaret Drive to the junction with Oban Drive.	Glasgow City Council Air Quality Action Plan 2009 https://www.glasgow.gov.uk/CHttpHandler.ashx?id=32447&p=0

AQMA Name	Pollutants and Air Quality Objectives	City / Town	Description	Action Plan
	PM_{10} Annual Mean		In 2016 this AQMA was amended in respect of the annual mean PM_{10} Objective.	

2.2 Progress and Impact of Measures to address Air Quality in Glasgow

Glasgow has taken forward a number of measures during the current reporting year of 2017 in pursuit of improving local air quality. Details of AQAP measures which have progressed in 2017 are shown in Table 2.2. More detail on these measures can be found via the link to the AQAP contained in Table 2.1 above. A summary of the AQAP measures is shown in Appendix D.

Table 2.2 – Progress on Measures to Improve Air Quality

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
1	Vehicle Idling Council will expand programme of vehicle idling enforcement	Public Information	Regular scheduled patrols to enforce and/or educate regarding vehicle idling	Public Health LES		2003 onwards		Low	Council continues to promote awareness and benefits in regard to reduction of vehicle idling via billboards and advertising campaign on PSV vehicles, around schools and bus stops.	Ongoing	3 FPN issued during 2017.
2	Emission Testing	Public Information	Council will continue a programme of roadside emission testing	Public Health LES		2003 onwards		Low	40000+ vehicles tested	Ongoing	2800 vehicles tested 20 FPN's issued during 2017

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
3	Low Emission Zones	Promoting Low Emission Transport	Cleaner Air for Scotland (CAFS) National Low Emission Framework (NELF)	Scottish Government GCC are a partner authority on the CAFS Governance Group	2015			Medium	LEZ received committee approval in 2017/18 Stakeholder workshops taken place. Phase 1 modelling completed. Traffic Regulation Condition application submitted.	2022	Glasgow City Council have agreed to introduce Scotland's first LEZ in an area broadly equivalent to the city centre AQMA. The LEZ Phase 1 will address local bus journeys from 31 December 2018.

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
4	Cleaner Taxis	Vehicle Fleet Efficiency	Council will prepare an emissions strategy to reduce emissions from taxi and private hire vehicles Proposals to limit the maximum age and increase the emission testing frequency for taxis researched and discussed with interested parties	Sustainable Glasgow LES	2009			Low/Medium	Taxis have been preferentially selected for roadside emissions testing. ----- Liaison with Taxi Operators Association and Licensing authority with regard to emission limits, maximum age and eco-driver training. -------- Glasgow Taxi's Group has joined the Glasgow Eco Stars scheme	Ongoing	

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
5	Council Workplace Travel Plan	Promoting Travel Alternatives	Travel Plan was relaunched in an updated form.	Glasgow City Council		2014		Low	Cycling Infrastructure improvements Lift share, car share facility for GCC Pool bike scheme Site Bike Scheme Cycle to work scheme Improvements at council premises including secure parking facilities.	Ongoing	

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
6	Car Clubs	Alternatives to Private Vehicle Use	The Council will make on street spaces available for car club vehicles.	Glasgow City Council	2009	2010 Onwards / 2015 Onwards (award of new operator contract)		Low	Car club has 36 vehicles including 3 full electric vehicles one of which is an EV Van in operation within Glasgow located on street in council provided bays. New spaces provided as club expanded. Land & Environmental services now use club as a corporate member.	Ongoing	2017/18 saw a focus on creating additional users / members for the scheme with an additional 484 members being added through targeted promotion supported by GCC and SCSP.
10	Air Quality Information	Public Information	The Council will provide data and information regarding current and longer term air quality monitoring on our web site and at variable message signs throughout the city	Glasgow City Council	2016	2016		Low	The Council secured funding to install two CityTrees in city centre Air Quality Management Area. These installations contain information on and links to air quality information sources.	2017	The manufacturer has recently replanted both installations and is preparing to replace the irrigation and comms systems following the completion of the European Championship which are currently taking place in Glasgow.

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
13	Cycling Strategy	Promoting Travel Alternatives	Air Quality grants will be sourced for funding cycling improvements in the city.	Glasgow City Council	2011	Ongoing		Low	Grants have been obtained from Scottish Govt. and used for provision of cycling infrastructure such as bike shelters and stances across the city. Continued investment in cycling infrastructure including community centred projects and secure bike storage at schools. Glasgow City Council's Strategic Plan for Cycling 2016 - 2025 was recognised as a category winner courtesy of the Scottish Transport Awards	Ongoing	During 2017–18 £104,000 was invested in various aspects of Sustainable / Active Travel. Generally this was funded from the Scottish Governments air quality fund with additional grant funding from sources, such as Sustrans or GCC revenue spend.

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
14	Bus Retro-fit Scheme	Promoting Low Emission Transport	Grant funding to retro-fit Buses with new exhaust tech to reduce harmful emissions. Grant of ~ £250k agreed from Scottish Government Discussions with bus operators / SPT / Retrofit companies and procurement	Glasgow City Council / Strathclyde Partnership for Transport	2011			Low	Follow up proposals rejected by bus companies. Funding redirected towards joint purchase with SPT of 2 fully electric buses for use on Route 100 to Transport museum.	Completed	Working with the commercial and bus sectors, the Energy Saving Trust and the Low Carbon Vehicle Partnership, the Scottish Gov. is to introduce an Engine Retrofitting Centre in Scotland to support the delivery of LEZs. GCC will assist in delivery of this significant for piece of work.

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
17	Promote Greener Vehicles		The Council will investigate the potential for reduced rate street parking for electric and hybrid vehicles	Glasgow City Council	2012	2012		Low	Glasgow City Council has introduced a network of public charging points, presently 93 each point is capable of simultaneously charging 2 vehicles. Charging points have also been provided within council car parking facilities. A further 8 charge points will be added (currently in procurement) Whilst parking charges now apply, the electricity is provided free of charge.	Ongoing	Funding has been sought for an additional 24 charge points for the 2018/19 programme. In addition, the Council charge point strategy is currently being developed along-side a 5-year implement ation plan that will see a substantia l increase in the number of points deployed each year.

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
18	Leading by Example		The Council will demonstrate best practice in the operation of its vehicle fleet The Council have introduced a fleet of electric vehicles through a government backed scheme and trained staff in the efficient use of these vehicles.	Glasgow City Council				Low	Expanded the use of electric vehicles within the fleet including new Nissan Leaf vehicles. 'Fuel Efficient Driver' training recently undertaken by 120 members of staff, who regularly drive on business. The vehicle procurement framework is being reviewed allowing renewed emphasis to be placed on zero and low emissions vehicles. Council currently has a total of 18 electric vehicles.	Ongoing	Proposals to introduce electric vans and increase the level of EV vehicles by another 30 during 18 / 19

Measure No.	Measure	Category	Focus	Lead Authority	Planning Phase	Implementation Phase	Key Performance Indicator	Target Pollution Reduction in the AQMA	Progress to Date	Estimated Completion Date	Comments
18	Leading by Example		The Council will demonstrate best practice in the operation of its vehicle fleet The Glasgow ECO Stars Fleet Recognition Scheme is being promoted by Glasgow City Council. The scheme is designed to raise awareness with both public and private organisations of the important role they can play in helping to improve air quality	Glasgow City Council		2014		Low	The scheme has been operating since September 2014 and has currently recruited 160 members encompassing approximately 8000 fleet vehicles including two of the largest bus companies operating within Glasgow.	Ongoing	Glasgow Taxi's Group has joined the Glasgow Eco Stars scheme.

2.3 Cleaner Air for Scotland

Cleaner Air for Scotland – The Road to a Healthier Future (CAFS) is a national cross-government strategy that sets out how the Scottish Government and its partner organisations propose to reduce air pollution further to protect human health and fulfil Scotland's legal responsibilities as soon as possible. A series of actions across a range of policy areas are outlined, a summary of which is available at http://www.gov.scot/Publications/2015/11/5671/17. Progress by Glasgow City Council against relevant actions within this strategy is demonstrated below.

2.3.1 Transport – Avoiding travel – T1

All local authorities should ensure that they have a corporate travel plan (perhaps within a carbon management plan) which is consistent with any local air quality action plan.

Glasgow currently does not have a corporate travel plan. The 2009 AQAP includes measures to promote staff travel to the workplace.

2.3.2 Climate Change – Effective co-ordination of climate change and air quality policies to deliver co-benefits – CC2

Scottish Government expects any Scottish local authority which has or is currently developing a Sustainable Energy Action Plan to ensure that air quality considerations are covered.

Glasgow has implemented an Energy and Carbon Masterplan which provides a blue print to reduce carbon dioxide emissions by 30% by 2020. This masterplan highlights over 30 actions to meet the reduction target focussing heavily on renewable energy power supplies and the commitment to less polluting transport modes. Links to the masterplan and Glasgow's Carbon Management Plan 2 are available at.

https://www.glasgow.gov.uk/index.aspx?articleid=17181

3. Air Quality Monitoring Data and Comparison with Air Quality Objectives

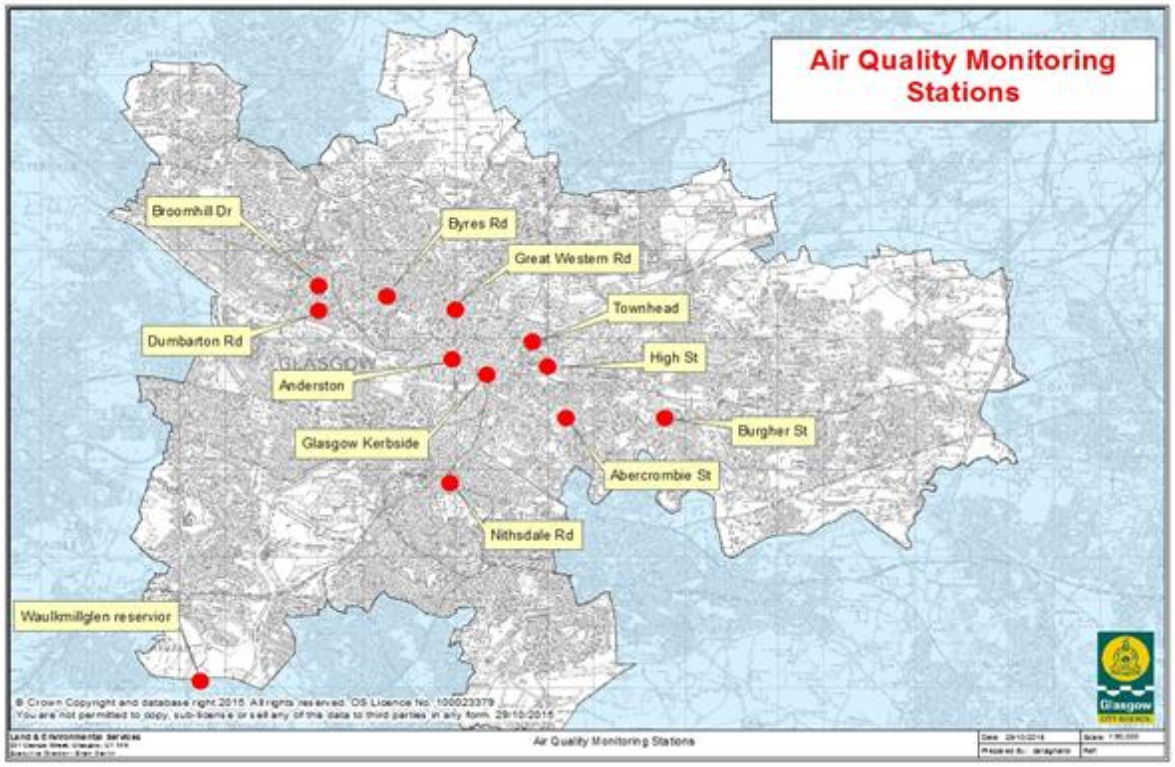
3.1 Summary of Monitoring Undertaken

3.1.1 Automatic Monitoring Sites

This section sets out what monitoring has taken place and how local concentrations of the main air pollutants compare with the objectives.

During 2017, Glasgow undertook automatic (continuous) monitoring at 12 sites, the locations are shown in Figure 3.1 below. Station details including pollutants monitored are shown in Appendix A. Table A..

Figure 3.1 Location of Automatic Monitoring Sites



National monitoring results are available at:

http://www.scottishairquality.co.uk/

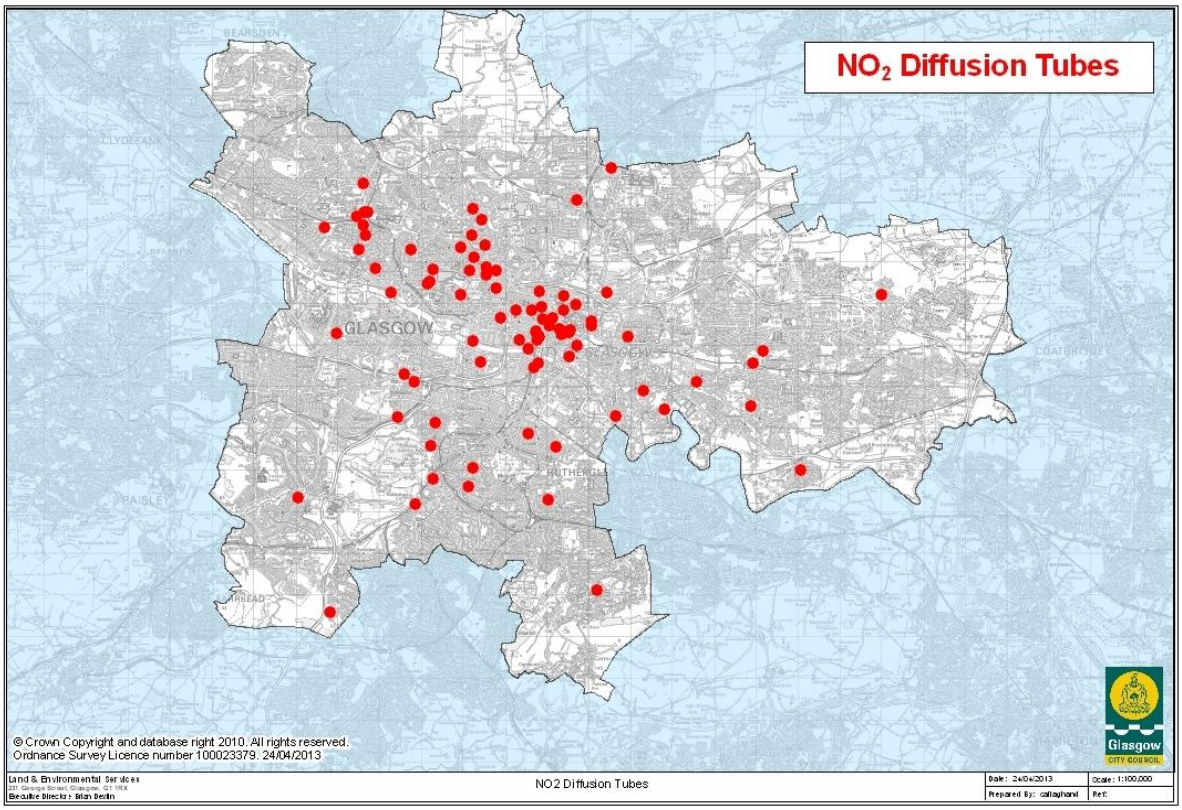
Further details on how the monitors are calibrated and how the data has been adjusted are included in Appendix C.

3.1.2 Non-Automatic Monitoring Sites

During 2017, Glasgow undertook non-automatic (passive) monitoring of Nitrogen Dioxide (NO_2) at 104 sites and Benzene (C_6H_6) at 4 locations. Whilst concentrated within the City Centre AQMA, NO_2 diffusion tubes are also widely dispersed throughout the city as shown in Figure 3.2 following.

Specific site details are shown in Appendix A. Table A..

Figure 3.2 Location of Nitrogen Dioxide (NO_2) Diffusion Tubes



Further details on Quality Assurance/Quality Control (QA/QC) and bias adjustment for the diffusion tubes are included in Appendix C.

3.2 Individual pollutants

The air quality monitoring results presented in this section are, where relevant, adjusted for annualisation and bias. Further details on adjustments are provided in Appendix C.

3.2.1 Nitrogen Dioxide (NO_2)

Table A. in Appendix A compares the ratified and adjusted monitored NO_2 annual mean concentrations for the past 5 years with the air quality objective of 40µg/m^3.

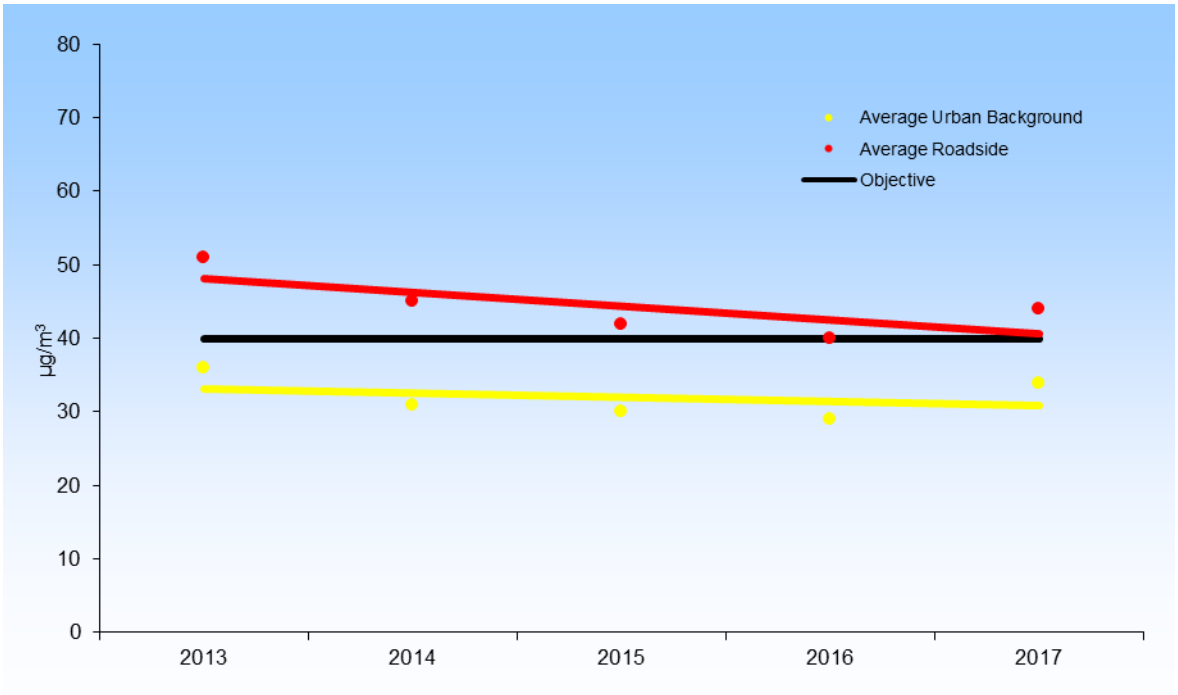
For diffusion tubes, the full 2017 dataset of monthly mean values is provided in Appendix B.

Table A. in Appendix A compares the ratified continuous monitored NO_2 hourly mean concentrations for the past 5 years with the air quality objective of 200µg/m^3, not to be exceeded more than 18 times per year.

During 2017, Glasgow City Council has measured concentrations of NO_2 above the Annual Mean Objective at two automatic monitoring stations, Kerbside (GLA4) and Dumbarton Road (GL9) these are both within existing Air Quality Management Areas (AQMA's). The Annual Mean Objective was also exceeded at several locations, by diffusion tube, within the existing City Centre AQMA.

Whilst the underlying trend across the City Centre AQMA continues to suggest an overall drop in NO_2 concentrations as shown in Figure 3.3, there was an increase in the number of locations where the Annual Mean Objective was exceeded (12) when compared to 2016 (7). On average there was a 10% increase in NO_2 concentrations measured by diffusion tube within the City Centre AQMA, 8% citywide. In contrast, concentrations measured during 2017 at the automatic stations, both within the city centre AQMA and citywide continued to show either a decrease, 6% citywide or little or no change, city centre AQMA, when compared to 2016.

Figure 3.3 Trends in Annual Mean Nitrogen Dioxide Concentration Within City Centre AQMA (Diffusion Tube) Comparison with Annual Mean Objective (40µg/m³)



The Hourly Mean Objective was not exceeded at any of the automatic monitoring stations. One diffusion tube location (CC13) returned an annual mean >60µg/m³ (68µg/m³) which indicates a possible exceedance of the Hourly Mean Objective at this location. Note however, that CC13 is approx. 100m from the automatic monitoring station on Hope St. (GLA4) with a common pollutant source, i.e. traffic using Hope St. The exceedances of the Hourly Mean Objective measured at GLA4 have not exceeded the objective limit (18 hours) in recent years.

3.2.2 Particulate Matter (PM_{10})

Table A. in Appendix A compares the ratified and adjusted monitored PM_{10} annual mean concentrations for the past 5 years with the air quality objective of 18µg/m³.

Table A. in Appendix A compares the ratified continuous monitored PM_{10} daily mean concentrations for the past 5 years with the air quality objective of 50µg/m³, not to be exceeded more than 7 times per year.

Neither the Annual Mean Objective for PM_{10} nor the Daily Mean Objective was exceeded at any monitoring location during 2017.

3.2.3 Particulate Matter ($PM_{2.5}$)

Table A. in Appendix A compares the ratified and adjusted monitored $PM_{2.5}$ annual mean concentrations for the past 5 years with the air quality objective of 10µg/m^3.

For Scottish Local Authorities particulates at $PM_{2.5}$ have now been prescribed in regulation with an Annual Mean Objective of 10µg/m^3 by 2020 this objective was not exceeded at any monitoring location during 2017.

3.2.4 Benzene (C_6H_6)

Table A.8 in Appendix A shows the monitored C_6H_6 annual mean concentrations with the air quality objective of 3.25µg/m^3. The Annual Mean Objective was not exceeded at any monitoring location during 2017.

3.2.5 Carbon Monoxide (CO), Sulphur Dioxide (SO_2), Lead (Pb) and 1,3-Butadiene

Monitoring of these pollutants has been discontinued in Glasgow.

4. New Local Developments

No new local developments have been identified which require consideration in this report.

4.1 Road Traffic Sources

No new road traffic sources have been identified which require consideration in this report.

4.2 Other Transport Sources

No significant new transport sources have been identified which require consideration in this report.

4.3 Industrial Sources

No significant new industrial sources have been identified which require consideration in this report.

4.4 Commercial and Domestic Sources

No significant new commercial and domestic sources have been identified which require consideration in this report.

4.5 New Developments with Fugitive or Uncontrolled Sources

No significant new developments with fugitive or uncontrolled sources have been identified which require consideration in this report.

5. Planning Applications

There have been several planning applications for residential developments within the last year which required air quality assessments due to the introduction of new receptors or increased emissions due to additional vehicle movements. None of the assessments predicted significant adverse air quality impacts or new exceedances of the objectives.

A planning application and associated air quality assessment has been submitted in respect of the ground preparation works for a major mixed use development in the Sighthill Road area of Glasgow. The assessment concluded that, with appropriate mitigation measures in place, the potential for dust nuisance in the local area would be minimal. A further air quality assessment will be required once the details of the site end use are finalised.

6. Conclusions and Proposed Actions

6.1 Conclusions from New Monitoring Data

Automatic analyser and diffusion tube monitoring of NO_2 indicates that concentrations are likely to continue to exceed the Annual Mean Objective at locations within the existing City Centre AQMA. The Objective was also exceeded at one location within the Byres Road / Dumbarton Road AQMA.

NO_2 Concentrations within the Parkhead AQMA confirmed that Glasgow can now proceed with the revocation of this AQMA. It is not considered that any further amendment to the remaining AQMA's is necessary or that any new areas require more detailed investigation.

There were no exceedances of the NO_2 Hourly Mean Objective at any of the automatic monitoring stations; one diffusion tube within the City Centre AQMA produced an annual mean concentration in excess of 60$\mu g/m^3$. It is not considered that any further amendment to this AQMA's is necessary or that any new areas require more detailed analysis.

There were no exceedances of the PM_{10} Annual Mean Objective. Concentrations within the Byres Road / Dumbarton Road AQMA confirmed that Glasgow can now proceed with the revocation of this AQMA in respect of the annual mean for PM_{10}. It is not considered that any further amendment to the remaining AQMA is necessary or that any new areas require more detailed investigation.

There were no exceedances of the 24hour Mean Objective, neither did the 90^{th} percentile value from those sites with <90% data capture indicate that this objective would have been exceeded.

There were no exceedances of the $PM_{2.5}$ Annual Mean Objective.

6.2 Conclusions relating to New Local Developments

No new local developments have been identified which require consideration in this report.

6.3 Proposed Actions

Glasgow shall now proceed with the revocation of the AQMA's currently in place in respect of the Annual Mean Objective for NO_2 at Parkhead Cross and the Annual Mean Objective for PM_{10} at Byres Road / Dumbarton Road.

During 2018 Glasgow will proceed in partnership with the Scottish Government to deliver Scotland's first Low Emission Zone (LEZ), subject to receiving the relevant approval from the Traffic Commissioner. The LEZ Phase 1 will address local bus journeys from 31 December 2018, leading to all vehicles entering the zone, including private cars, being fully compliant by the end of 2022. The area covered by the LEZ is broadly equivalent to the city centre AQMA.

It is anticipated that the implementation of the LEZ in Glasgow will monopolise the majority of the Council's air quality resources. However, it is also recognised that the AQAP was last revised in 2009 and will be reassessed in 2019.

Appendix A: Monitoring Results

Table A.1 – Details of Automatic Monitoring Sites

Site ID	Site Name	Site Type	X OS Grid Ref	Y OS Grid Ref	Pollutants Monitored	In AQMA?	Monitoring Technique	Distance to Relevant Exposure (m) (1)	Distance to kerb of nearest road (m) (2)	Inlet Height (m)

Notes: Exceedances of the NO_2 annual mean objective of 40µg/m^3 are shown in **bold**.

NO_2 annual means exceeding 60µg/m^3, indicating a potential exceedance of the NO_2 1-hour mean objective are shown in **bold and underlined.**

(1) data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

(3) means for diffusion tubes have been corrected for bias.

(4) * means have been “annualised” as per LAQM.TG(16) if valid data capture for the full calendar year is less than 75%. See Appendix C for details.

Appendix C: Supporting Technical Information / Air Quality Monitoring Data QA/QC

C.1 Mobile Monitoring Station

In addition to the 12 permanent static monitoring stations in the city, Glasgow also operates a mobile station which is equipped with instrumentation to monitor both NO_2 (Chemiluminescent) and Particulates (FIDAS). During 2017 this unit was situated on Northinch St. Scotstoun (continuation of monitoring which began during June 2016). Monitoring on Northinch St. was initiated in response to local concerns in relation to a previous planning application (15/00549/DC) for the development of an energy from waste facility.

Table C.1.1 – Mobile Monitoring Station NO_2 Monitoring Results ($\mu g/m^3$)

Site Name (Type)	Within AQMA?	Monitoring Period	Valid Data Capture %	Mean Concentration $\mu g/m^3$	Number of Exceedances of Hourly Mean Objective (200 $\mu g/m^3$) (99.8th Percentile of Hourly Means)
Northinch St (Background)	No	Jan - Dec	97	22	0(101)

Table C.1.2 – Mobile Monitoring Station PM_{10} Monitoring Results ($\mu g/m^3$)

Site Name (Type)	Within AQMA?	Monitoring Period	Valid Data Capture %	Mean Concentration $\mu g/m^3$	Number of Exceedances of 24-Hour Mean Objective (50 $\mu g/m^3$) (90th Percentile of 24 Hour Means)
Northinch St (Background)	No	Jan - Dec	97	11	0(21)

Table C.1.3 – Mobile Monitoring Station $PM_{2.5}$ Monitoring Results (µg/m^3)

Site Name (Type)	Within AQMA?	Monitoring Period	Valid Data Capture %	Mean Concentration µg/m^3
Northinch St (Background)	No	Jan - Dec	97	6

C.2 Parkhead Cross AQMA

The Parkhead Cross AQMA was declared in 2007 in respect of exceedances of the annual mean NO_2 objective. Monitored NO_2 concentrations (diffusion tube) consistently exceeded the annual mean objective prior to Parkhead Cross being declared an AQMA. Modelling, carried out for the 2005 Detailed Assessment both confirmed and set the boundaries of the AQMA.

Figure C.2.1 below shows the extent of the AQMA and the locations of air quality monitoring within it.

Monitoring was improved within the Parkhead area in 2011 by the installation of an automatic monitoring station, Glasgow Burgher St. (GL6) shown in green in Figure C.2.1 Diffusion tube monitoring, locations shown in blue, was increased in 2015 with a view to progressing towards the revocation of this AQMA.

Figure C.2.1 Parkhead Cross AQMA

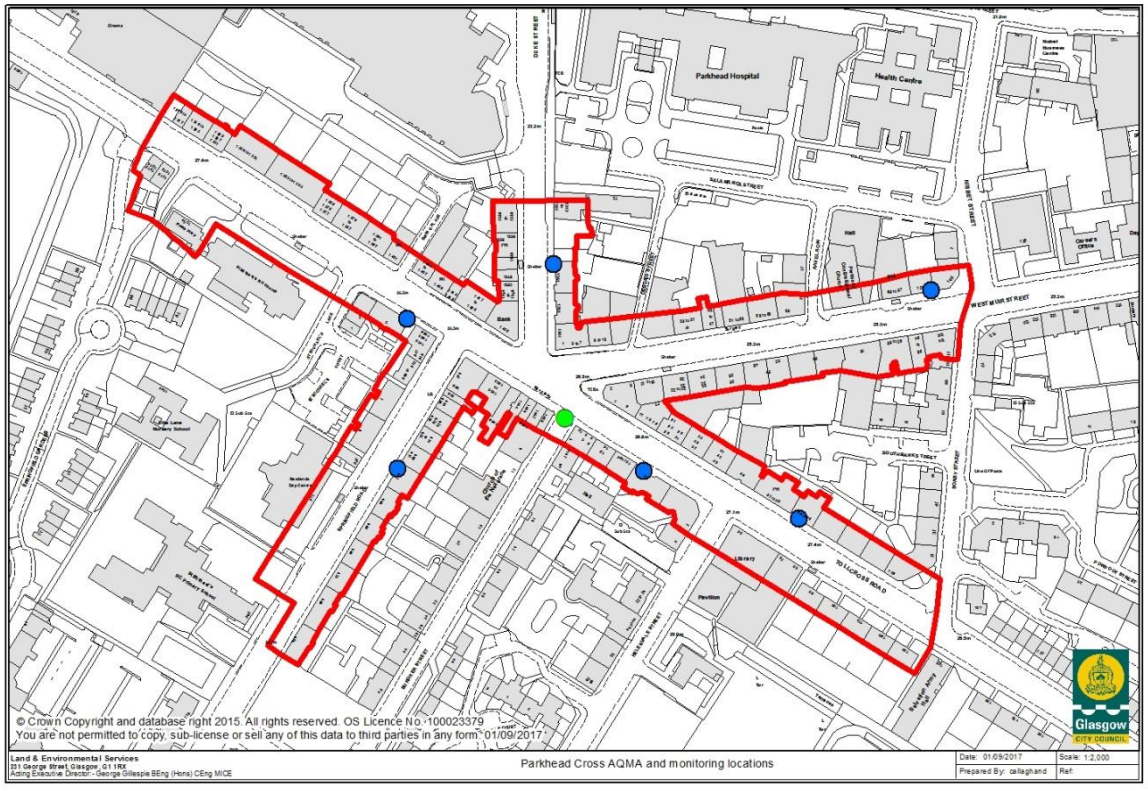

Table C.2.1 shows the results of monitoring within the AQMA since the last measured exceedance of the objective.

Whilst there have been no monitored exceedances of the annual mean NO_2 objective in recent years, the extended monitoring undertaken since 2015 produced results close to the objective at one roadside diffusion tube (GLE14).

Given the uncertainty inherent in diffusion tube monitoring, Glasgow City Council opted to continue to monitor at this location through 2017. Whilst, once again the result was close to the objective, monitoring at this location and the existing longer term locations within the AQMA confirmed at least three years of compliance with the objective.

Glasgow City Council will now proceed with the revocation of the Parkhead Cross AQMA.

Table C.2.1 – Parkhead AQMA Annual Mean NO_2 Monitoring Results ($\mu g/m^3$)

Site ID	Site Name (Type)	Monitoring Type	NO_2 Annual Mean Concentration ($\mu g/m^3$)							
			2010	2011	2012	2013	2014	2015	2016	2017
GL6	Burgher Street (Roadside)	Automatic	-	35	34	28	27	27	33	26
GE01	Westmuir Street (Roadside)	Diffusion Tube	**52**	39	39	39	33	32	35	36
GE11	79 Tollcross Road (Roadside)	Diffusion Tube	-	-	-	-	-	25	24	-
GE12	101 Westmuir Street (Roadside)	Diffusion Tube	-	-	-	-	-	27	26	-
GE13	1341 Duke Street (Roadside)	Diffusion Tube	-	-	-	-	-	24	23	-

Site ID	Site Name (Type)	Monitoring Type	NO_2 Annual Mean Concentration ($\mu g/m^3$)							
			2010	**2011**	**2012**	**2013**	**2014**	**2015**	**2016**	**2017**
GE14	St. Michaels Lane (Roadside)	Diffusion Tube	-	-	-	-	-	37	39	37
GE15	902 Springfield Road (Roadside)	Diffusion Tube	-	-	-	-	-	24	26	-

Exceedances of the NO_2 annual mean objective of 40µg/m^3 are shown in bold.

C.3 Byres Road and Dumbarton Road AQMA

The Byres Road and Dumbarton Road AQMA, shown in figure C.3.1 was amended in 2016 in respect of the annual mean PM_{10} objective. This amendment coincided with the revocation of the city wide AQMA for this pollutant (areas out with the City Centre AQMA). At the time of the general city wide revocation it was considered that monitored PM_{10} concentrations within this area indicated that exceedances of the annual mean objective remained a possibility.

Monitoring of particulates (PM_{10}) has been carried out within this AQMA at the Byres Road (GLA6) monitoring station since 2005. An additional monitoring station, Dumbarton Road (GL9), was introduced into the AQMA in 2012.

Figure C.3.1 Byres Road and Dumbarton Road AQMA

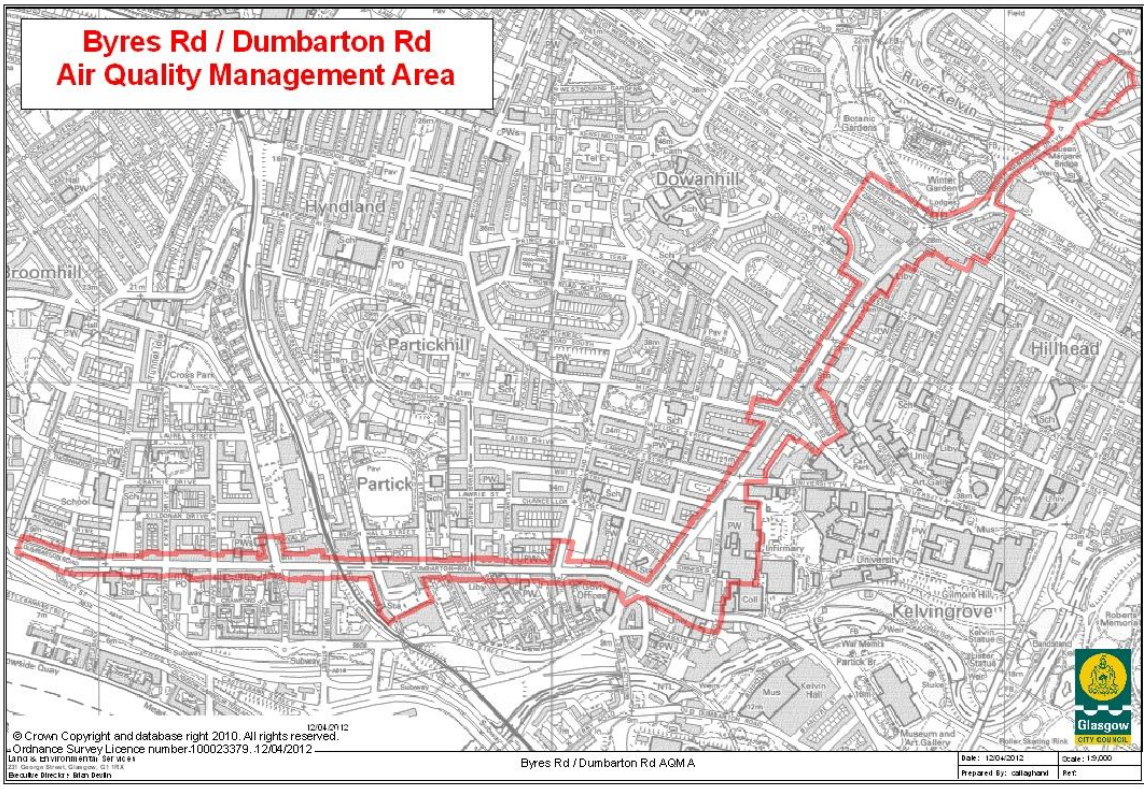

Table C.3.1 shows the results of monitoring within this AQMA since the introduction of the Dumbarton Road monitoring station.

The annual mean objective has not been exceeded at this location since 2013. As shown in Table A.5 – Annual Mean PM_{10} Monitoring Results, comparison with other automatic monitoring stations across the city confirm that measured annual mean

concentrations within this AQMA are now comparable with those in other areas which were included in the now revoked city wide AQMA.

Table C.3.1 – Byres Road and Dumbarton Road AQMA Annual Mean PM_{10} Monitoring Results ($\mu g/m^3$)

Site ID	Site Name (Type)	Monitoring Type	PM_{10} Annual Mean Concentration ($\mu g/m^3$)					
			2012	2013	2014	2015	2016	2017
GLA6	Byres Road (Roadside)	FDMSTEOM	13	13	11	10	12	13
GL9	Dumbarton Road (Roadside)	TEOM	18	**19**	17	17	15	15

Exceedances of the PM_{10} annual mean objective of 18$\mu g/m^3$ are shown in bold.

Glasgow City Council will now proceed with the revocation of the 2016 amendment to the Byres Road and Dumbarton Road AQMA, in respect of the annual mean PM_{10} objective.

C.4 Air Quality Monitoring Data QA/QC

The 12 permanent monitoring stations in Glasgow form part of the Air Quality in Scotland monitoring network. Instruments are calibrated by the Local Site Operators according to the specific site guidelines, audits are carried out every six months by Ricardo Energy and Environment. All of the automatic air quality data gathered is independently ratified by Ricardo and made available for viewing by the public at the Scottish Government funded air quality website at:
http://www.scottishairquality.co.uk

This webpage also provides access to the relevant QA/QC information relevant to LAQM report requirements. The instrument UKAS calibration certification generated by the six monthly audit programme for Glasgow's monitoring stations is available here at:
http://www.scottishairquality.co.uk/laqm/certificates-calibration

Individual site statistics for each monitoring station and instrument is available here at:
http://www.scottishairquality.co.uk/laqm/statistics-pdf

For 2017 the GSS (20% TEA in Water) annual bias adjustment used was **0.91**. The NO_2 diffusion tubes used in Glasgow Councils NO_2 diffusion tube network are provided and analysed by GCC Scientific Services. Measured NO_2 concentrations are adjusted by an annual bias adjustment value taken from the National Diffusion Tube Bias Adjustment Factor Spreadsheet. Further information on bias adjustment and laboratory proficiency (WASP) is available here at:
http://www.scottishairquality.co.uk/laqm/tools

There is one location within the GCC network of NO_2 diffusion tube monitoring for which a distance correction was considered to be justified i.e. a single primary road source with a residential receptor set back from the measurement site. A corrected value for this location is shown in Table C.4.1 following. Information and guidance on the Nitrogen Dioxide Fall off with Distance Calculator is also available here at: http://www.scottishairquality.co.uk/laqm/tools

Table C.4.1 – Diffusion Tube Locations Corrected for Distance

Site ID	Site Name	Site Type	X OS Grid Ref	Y OS Grid Ref	Distance to Relevant Exposure (m)	Measured Annual Mean (μg/m^3)	Corrected Annual Mean at Receptor (μg/m^3)
GS31	Govan Road (Hospital)	Roadside	253865	666006	2	38	33

For 2017, data capture from two diffusion tube monitoring locations CC02 and GW11 were below 75%, results from these locations have been annualised in Table A.3, in line with the method outlined in LAQM TG16 Box 7:10 Annualising NO2 Diffusion Tube Monitoring Data.
http://www.scottishairquality.co.uk/laqm/technical-guidance

Appendix D Air Quality Action Plan Summary

Table D.1 – Progress on Measures to Improve Air Quality

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
1	Vehicle Idling Council will expand programme of vehicle idling enforcement	Public Information	Regular scheduled patrols to enforce and/or educate regarding vehicle idling	2003 onwards	Low	Council continues to promote awareness and benefits in regard to reduction of vehicle idling via billboards and advertising campaign on PSV vehicles, around schools and bus stops.	Ongoing
2	Emission Testing	Public Information	Council will continue a programme of roadside emission testing	2003 onwards	Low	40000+ vehicles tested	Ongoing
3	Low Emission Zones	Promoting Low Emission Transport	The Council will undertake a detailed feasibility study with a view to introducing LEZs in Glasgow	2009 / 2009-2010	Medium	Feasibility study into LEZs in Glasgow was completed in 2010.	Completed 2010
3	Low Emission Zones	Promoting Low Emission Transport		2014	Medium	Trial of LEZ camera technology completed.	Completed 2014

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
3	Low Emission Zones	Promoting Low Emission Transport	Cleaner Air for Scotland (CAFS) National Low Emission Framework (NELF)	2015 / 2022	Medium	2016 CAFS Progress Report published -------- LEZ received committee approval in 2017/18 Stakeholder workshops taken place. Phase 1 modelling completed. Traffic Regulation Condition application submitted. Glasgow City Council have agreed to implement Scotland's first LEZ in an area broadly equivalent to the city centre AQMA. The LEZ Phase 1 will address local bus journeys from 31 December 2018.	2022

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
4	Cleaner Taxis	Vehicle Fleet Efficiency	Council will prepare an emissions strategy to reduce emissions from taxi and private hire vehicles Proposals to limit the maximum age and increase the emission testing frequency for taxis researched and discussed with interested parties	2009 /	Low/Medium	Taxis have been preferentially selected for roadside emissions testing. --- Liaison with Taxi Operators Association and Licensing authority with regard to emission limits, maximum age and eco-driver training. --- Glasgow Taxi's Group has joined the Glasgow Eco Stars scheme	Ongoing
5	Council Workplace Travel Plan	Promoting Travel Alternatives	Council will prepare a workplace travel plan for all employees	2009 / 2011	Low	The travel plan has been completed, however it is a living document, tasks have no finite life span	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
5	Council Workplace Travel Plan	Promoting Travel Alternatives	Travel Plan was relaunched in an updated form.	2014	Low	Cycling Infrastructure improvements Lift share, car share facility for GCC Pool bike scheme Site Bike Scheme Cycle to work scheme Improvements at council premises including secure parking facilities.	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
6	Car Clubs	Alternative to Private Vehicle Use	The Council will make on street spaces available for car club vehicles.	2009 / 2010 Onwards	Low	*Car club has 36 vehicles including 3 full electric vehicles including an EV Van in operation within Glasgow located on street in council provided bays.* *New spaces provided as club expanded. Land & Environmental services now use club as a corporate member.* *2017/18 saw a focus on creating additional users / memberships for the scheme with an additional 484 members being added through targeted promotion supported by GCC and SCSP*	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
7	Public Service Vehicles	Vehicle Fleet Efficiency	The Council will pursue the use of traffic regulation conditions to control bus emissions within AQMAs. The Quality Partnership Scheme in the city requires that buses have to meet set emission standards by pre-agreed dates on certain routes.	2009 / 2012	Medium	From January 2014 100% of each operator's streamline journeys within Glasgow City boundary will be operated with vehicles meeting EURO 3 emission engine standard for particulates (PM10). From June 2014 a minimum of 20% of total scheduled journeys within City Centre AQMA to be operated with vehicles meeting full Euro4 emission standards.	2019

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
7	Public Service Vehicles	Vehicle Fleet Efficiency	The Council will pursue the use of traffic regulation conditions to control bus emissions within AQMAs. The Quality Partnership Scheme in the city requires that buses have to meet set emission standards by pre-agreed dates on certain routes.	2009 / 2015	Medium	The implementation of the Fastlink route linking the City Centre and the new Southern General Hospital introduced emission standards. Initially Euro IV or V. becoming a minimum of Euro V on all sections by 2018.	2021

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
8	Boiler Emissions	Promoting Low Emission Plants	The Council will raise awareness and provide information to assist in energy efficiency in the home and workplace	2010 / 2011 onwards	Low	Biomass Guidance produced 2011 addressing boiler emissions Glasgow Home Energy Advice Team (G-HEAT) has been established to provide independent advice on energy related issues to householders in the city Attention of developers continues to be drawn to biomass guidance at the planning stage	Ongoing
9	Planning Guidance	Policy Guidance and Development Control	The Council will produce revised planning guidance	2010 / 2012	Medium	Guidance complete and available on council website	

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
9	Planning Guidance	Policy Guidance and Development Control	Glasgow City Council is in the process of replacing its current Planning Guidance with more formal Supplementary Planning Guidance in respect of air quality (SPG).	2015 /	Medium		Ongoing
10	Air Quality Information	Public Information	The Council will provide data and information regarding current and longer term air quality monitoring on our web site and at variable message signs throughout the city	2010 / 2012 ongoing	Low	All air quality review and assessment reports are available on the GCC website. Further reports, guidance documents and links to be added when complete. Daily Update of Air Quality Data now also published on the GCC website. Appropriate VMS messaging now in place on Transport Scotland motorway VMS network.	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
10	Air Quality Information	Public Information	The Council will provide data and information regarding current and longer term air quality monitoring on our web site and at variable message signs throughout the city	2016	Low	The Council secured funding to install two CityTrees in city centre Air Quality Management Area. These installations contain information on and links to air quality information sources.	2017
11	Construction Sites	Policy Guidance and Development Control	The Council will produce a code of practice for construction / demolition contractors	2011 / 2012	Low	Guidance produced and available on Council web site	2012
12	Fire Reduction	Public Information	The Council will investigate multi agency strategic level actions aimed at reducing the number of fires and harmful emissions	2011	Low	The Council have promoted and facilitated educational visits to schools to highlight the dangers of fires and fire starting to children.	2011

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
13	Cycling Strategy	Promoting Travel Alternatives	Air Quality grants will be sourced for funding cycling improvements in the city.	2011 / 2012 Ongoing	Low	Grants have been obtained from Scottish Govt. and used for provision of cycling infrastructure such as bike shelters and stances across the city. Continued investment in cycling infrastructure including community centred projects and secure bike storage at schools.	Ongoing
14	Bus Retro-fit Scheme	Promoting Low Emission Transport	Grant funding to retro-fit Buses with new exhaust tech to reduce harmful emissions. Grant of ~ £250k agreed from Scottish Government Discussions with bus operators / SPT / Retrofit companies and procurement	2011 / 2014	Low	Follow up proposals rejected by bus companies. Funding redirected towards joint purchase with SPT of 2 fully electric buses for use on Route 100 to Transport museum.	Completed

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
15	Tree Planting		The Council will investigate the potential for a programme of tree planting as a means of city centre PM10 reduction	/ 2016	Low	Programme of tree planting within the city continues The Council also secured funding to install two CityTrees in city centre Air Quality Management Area. These installations are comprised of moss and vascular plants and facilitate the introduction of greening into hard stand areas.	2017
16	CARBOTRAF	Traffic Management	EU funded project to bring about real-time reduction in traffic pollution through active traffic management.	2011 / 2014	Low	Demonstrator in two cities to show relationship between black carbon and real time traffic management.	Completed

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
17	Promote Greener Vehicles		The Council will investigate the potential for reduced rate street parking for electric and hybrid vehicles	2012 / 2012	Low	GCC now have 93 publically available electric vehicle charge points. Due to the popularity of these, particularly the on-street units, parking charges and time limits have been imposed. The electricity consumed will remain free.	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
18	Leading by Example		The Council will demonstrate best practice in the operation of its vehicle fleet The Council have introduced a fleet of electric vehicles through a government backed scheme and trained staff in the efficient use of these vehicles.		Low	Expanded the use of electric vehicles within the fleet including new Nissan Leaf vehicles. 'Fuel Efficient Driver' training recently undertaken by 120 members of staff, who regularly drive on business. Council currently has a total of 18 electric vehicles. Proposals to introduce electric vans and increase the level of EV vehicles by another 30 during 18 / 19	Ongoing

Measure No.	Measure	Category	Focus	Planning and Implementation Phase	Target Pollution Reduction in the AQMA	Progress to Date	Completion Date
18	Leading by Example		The Council will demonstrate best practice in the operation of its vehicle fleet The Glasgow ECO Stars Fleet Recognition Scheme is being promoted by Glasgow City Council. The scheme is designed to raise awareness with both public and private organisations of the important role they can play in helping to improve air quality	2014	Low	The scheme has been operating since September 2014 and has currently recruited 160 members encompassing approximately 8000 fleet vehicles including two of the largest bus companies operating within Glasgow. Glasgow Taxi's Group has joined the Glasgow Eco Stars scheme.	Ongoing

Glossary of Terms

Abbreviation	Description
AQAP	Air Quality Action Plan - A detailed description of measures, outcomes, achievement dates and implementation methods, showing how the LA intends to achieve air quality limit values'
AQMA	Air Quality Management Area – An area where air pollutant concentrations exceed / are likely to exceed the relevant air quality objectives. AQMAs are declared for specific pollutants and objectives
APR	Air quality Annual Progress Report
AURN	Automatic Urban and Rural Network (UK air quality monitoring network)
CAFS	Cleaner Air For Scotland
Defra	Department for Environment, Food and Rural Affairs
DMRB	Design Manual for Roads and Bridges – Air quality screening tool produced by Highways England
FDMS	Filter Dynamics Measurement System for Particulates
FIDAS	Optical Light Scatter Measurement System for Particulates
LAQM	Local Air Quality Management
LEZ	Low Emission Zone
NO_2	Nitrogen Dioxide
NO_x	Nitrogen Oxides
O_3	Ozone
PM_{10}	Airborne particulate matter with an aerodynamic diameter of 10µm (micrometres or microns) or less
$PM_{2.5}$	Airborne particulate matter with an aerodynamic diameter of 2.5µm or less
